

Think About It!

95% of all workplace injuries and accidents are caused by unsafe employee acts, not unsafe conditions.

With ongoing safety audits you can bring your health and safety program up to the highest standards, protect your employees from injury, and improve your bottom line.

The Drake Mini Safety Gap Analysis Audit includes:

-  Workplace Access
-  General Work Environment
-  Office Environment
-  Electrical Safety
-  Lighting
-  Emergency Procedures
-  Needle Stick injuries
-  Infectious diseases
-  Unstable objects or structures
-  General Observations

A safety audit will help you:

- Identify the risks and the levels of those risks within the workplace
- Apply corrective actions to any identified deficiencies
- Identify strengths and weaknesses in your safety procedures
- Assess whether your safety procedures are legally compliant
- Compare current documentation and practices against best practice and legal obligations
- Find improvements that could be made in your safety procedures or practices
- Improve workplace safety and reduce possible workplace incidents, injuries or liability
- Increase employee awareness and understanding of WHS requirements

Protect your employees and your bottom line. Take steps today to make your organisation a healthier and safer place to work.
