Driving Competitive Advantage in Supply Chain and Logistics

SCLAA NSW Thought Leadership Series Autonomous Vehicles

Thursday, 26 April 2018

Autonomous vehicles technology is moving at an astounding pace. Worldwide, companies are investing heavily in technology which will revolutionise logistics over the coming decades.

Join us to explore and answer the question; "Will autonomous vehicles, drones and AI dominate the transport and delivery market space in the future?"

With an esteemed panel, at an intimate venue full of industry professionals, you will hear from 3 expert speakers and have the opportunity to engage in a facilitated Q&A discussion.

Speakers

Matthew Lloyd – Technical Director, Quirk Design

Innovation has been a large part of Matthew's career which has seen him work on various projects in the automotive industry from prototypes through to new product implementation. Matthew's career has given him a wide range of experiences from CAD through to Sales and more recently the challenging but rewarding Innovation Specialist role at Ford Australia. Matthew's diverse skillset and knowledge has seen him work in a multitude of different roles across various industries with the common factor being change. Matthew has also worked for Edag Australia and Saab through volatile times leading to exciting opportunities and exposure to international business.

Mark Tipping – Vice President, Tesla Owners Club of Australia

Mark has been fortunate to work with leading technologies throughout much of his career. Mark leads a team of ~75 IT Consultants and is an early adopter of useful technologies; from starting one of Australia's first SaaS businesses and working with Ontology Agents (artificial intelligence) in the late nineties, to rescuing bleeding-edge technology programs and more recently consulting in technology strategy at one of Australia's major brands. He is also the Vice President of the Tesla Owners Club of Australia and has travelled more than 80,000km hands-free in his Tesla on Autopilot - that is, watching over the car whilst it makes the driving decisions.

Bernard Lee – Head of Autonomous Delivery Program, Australia Post Accelerate

Bernard is a believer that technology and cultural change will rapidly change the way we work, think, socialise and do things.

As an Associate in the Australia Post Accelerate team, he explores the future of commerce where online shopping is frictionless and delivered on-demand. Bernard's key focus areas are delivery via autonomous vehicles and new business models in logistics and supply chain.
