# Artificial Intelligence in Supply Chain & Logistics

Wednesday, 16 May 2018

As the Supply Chain and Logistics industry moves toward a fully digital, data-driven future, a powerful new tool has appeared on the horizon: Artificial Intelligence or better known as AI.

Today, AI is more than a new, old hype as it is forging ahead to transform how businesses operate and thus reshape the way humans work. Still, public understanding of its concepts is limited and the impact on the way we understand our world today is currently being debated intensely.

During our next Thought Leadership event, we will explore and dissect how AI is disrupting the Supply Chain & Logistics Industry specifically. We will cover the basics AI & its benefits, case studies & how your business can begin to apply its potentials. Our last event sold out fast, so be sure to grab your tickets early.
