REGISTER NOW

Environmental initiatives have for years been superseded by economic initiatives and issues within organisations. We can't go on treating our planet as a second hand consideration to economic gains within supply chains. The good news is we can have both at the same time. Lean and Green is the terminology being applied to organisations continuously improving towards the circular economy and achieving economic gains simultaneously.

This presentation explores these organisations and the approaches they are taking to helping our planet and their companies at the same time. These approaches have not come soon enough, this presentation hopes to spread some of the supply chain best practices to help more organisation get on this journey. The presentation will appeal to current and future supply chain leaders who wish to make a difference for our planet and the organisations they work for.

Guest Speaker: Brad Jeavons, Business Improvement Manager at Winson Group

Brad Jeavons is an Organisation Improvement Leader whose purpose is helping people reach their potential to help socially and environmentally focused organisations achieve excellence and ultimately help their customers, society and the planet. Brad believes that an excellence journey conducted in the right manner will bring organisations multi-faceted results including profit, environmental gains and social benefits. Brad has worked with many organisations ranging from Government, retail, packaging, supply chain, Manufacturers, Medical and Social. Brad as part of SA Partners helps organisations take a Lean and Green journey towards the Circular Economy as well as greater outcomes for their customers, employees and the organisation.
