The Road to Warehouse Modernisation: 2024 Warehousing Vision Study

Wednesday, 11 September 2019

Date: Wednesday, 11 September 2019

Time: 1.00pm - 2.00pm (AEST)

Cost: No charge

As the volume and velocity of e-commerce continues to increase, new technologies will play a critical role for warehouse operators as they strive to remain competitive.

Zebra Technologies global research study uncovers the trends and challenges that are transforming these warehousing operations. The study taps into current and planned strategies for modernising warehouses, distribution centres and fulfillment centres from 2019-2024.

Labour, IT/technology utilisation, capacity usage and supply chain visibility are cited as the most significant operational challenges. Industry leaders must skilfully balance day-to-day responsibilities with their longer-term modernisation plans to ensure seamless operations and avoid supply chain disruptions.

Discover the biggest trends and challenges forecasted for the next five years. Join Zebra's evangelist, for this online event to learn more about the disruptive trends, challenges and opportunities facing our warehouse and supply chains.

Presenter: Jon Preedy

Jon Preedy is Zebra Technologies Technology Evangelist

With more than 17 years' experience in the mobility/technology industry, Preedy leads and helps develop solutions for Tier 1 customers across retail, transport and logistics and warehousing.

Preedy is a trusted adviser, thought leader, and is constantly involved in new technologies and go to market initiatives to help customers gain their competitive edge.
