REGISTER NOW

Please note this event is for end users and not suitable for other hardware vendors/resellers.

Registrations close on Monday, 21 October 2019

How can the Android evolution help improve your Supply Chain Operations?

If your business currently has, or is considering a RF Barcode Scanning solution, then Android based mobile devices should be part of the discussion. Android provides Supply Chain customers the opportunity to modernise, innovate and be more productive than other solutions on the market.

Hear from Google on how their latest Android innovations can ease the burden on IT of deployment and security challenges with features like Zero-Touch. You'll also understand why a management platform is critical and how Android Enterprise Recommended helps you select devices and partners with confidence.

Learn from Honeywell on why their 'mobility edge' Android products are providing smarter RF scanning options, improved lifecycle management and how wearable technology can be leveraged to create operational savings. Manhattan, a leading Warehouse Management solutions provider, will also share insights into the industry and the changing mobility landscape.

With over 10,000 Android deployments, Skywire Australia will help you navigate through these evolving technologies sharing case studies and demos to help you take advantage of these opportunities and improve your Supply Chain operations.
